The improvement is for an ammunition container for holding at least one magazine having a plurality of slots to receive bullets therein comprising a pouch having a back wall and a front wall overlapped thereon to define a top opening and a storage cavity with a retaining device for said magazine, an elongated element adapted to slidably pass through a bullet gap between two bullets on the said magazine, the said elongated element is transversely situated within the said cavity for balancing purposes when the said magazine is stored in the said cavity, and a fastening unit provided on the said front wall to detachably fasten in such a manner that the said bullets are capable of being extracted from the said magazine while retaining the said magazine in the said pouch.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
